

DA Applicator with full cone nozzles

Fitting Instructions

The DA Applicator is already assembled and ready to use. Please note some silicone grease has been applied to the threaded end to ensure the applicator can be unthreaded easily.

An 8mm push fit barb is included to connect your pole hose. Tip: If you soak the end of the pole hose in hot water it softens it and makes it easier to slide onto the barb.

The Applicator comes with a full cone nozzle already fitted, it is however possible to fit other 1/4" male thread nozzles to suit your needs. To do this, loosen the purple full cone nozzle with a 14mm spanner or socket and then simply unscrew the purple full cone nozzle and install the new nozzle. It is advisable to apply PTFE thread seal tape to prevent leaks and DO NOT over tighten the nozzle.

The purple (ref 6.5) nozzle can be used with lower flow rates and is therefore suitable for use with a back pack.

The dark green (ref 10) nozzle requires a higher flow rate for optimum efficiency and is therefore not always compatible for use with a backpack.
